

WheatIS: Progress report

Michael Alaux

WheatIS data submission

DSpace

- **Beta-version** to test:
<http://urgi.versailles.inra.fr/xmlui/>
- At the moment, available submission formats:
 - Genotyping
 - Phenotyping
 - SNP discovery
- An account has been send to each EWG members:
 - You can test -> the data will be deleted
 - Please give feedback:
michael.alaux@versailles.inra.fr

DSpace

- To do:
 - Developments based on feedbacks
 - Add new formats

DSpace Repository

DSpace is a digital service that collects, preserves, and distributes digital material. Repositories are important tools for preserving an organization's legacy; they facilitate digital preservation and scholarly communication.

Report of the RDA wheat group

RDA group main objectives

Workflow

Where we are

Survey/Interviews

- A survey launched in April 2014
- Answers from more than 200 respondents

Workshops

- 1-2 October 2014
- List of recommended data formats and vocabularies for each data type
- List of follow up actions for each data type (standardization e.g for traits, minimal set of metadata e.g for SNP files provenance or for markers, QTL and map handling, check for existing mapping tools, etc..)
- List of interoperability use cases

Standards summary

	Recommendations	Follow up actions
SNPs	Use of VCF data format	Look at a metadata set to contextualize the provenance of SNP files
genome annotations	Use of GFF3 data format Use of ontologies to fill « Attributes » column (a list of feature attributes in the format tag=value), column 9	Provide description guidelines for filling in content for column 9
Germplasms	Use of MPCD and Darwin Core Germplasm formats	Check how to integrate with tool specific formats (Grin Global, Genesys) Provide a table like human readable format for DWC Germplasm
Gene expression	Follow existing format standards laid out by repositories (NCBI GEO, EBI Array Express)	Check for mapping and conversion tools
Physical maps	Same as for genome annotations	Same as for genome annotations
Genetic maps	Data formats depend on tools that are used, rather concentrate on metadata harmonization	Look at a minimal metadata set to handle markers, QTL, maps Obtain details for linking requirements
Phenotypes	Use of isa-tab data format	Standardize the traits metadata Improve the reference to ontologies used for traits

Next steps

- In progress:
 - ◆ A first version of the « cookbook » will be available on a website: <http://ist.blogs.inra.fr/wdi/>
- Work with experts to meet the identified needs
 - ◆ Metadata harmonization, minimal metadata sets
 - ◆ Mapping among metadata, formats and ontologies
 - ◆ Survey on wheat ontologies

https://docs.google.com/forms/d/1YozHjRWVInQSVx0e2983C9shnd8E0skHxekJ_zK5T00/viewform?pli=1&edit_requested=true

- Two workshops in 2015
 - ◆ Refine the cookbook
 - ◆ Collect more interoperability use cases

Acknowledgments
